

Figure 1: The figure shows how prediction accuracy (left column) and constraint accuracy (right column) change over time when training with the class-similarity constraint for 200 epochs with different logics on Fashion-MNIST (top row) and CIFAR-10 (bottom row).

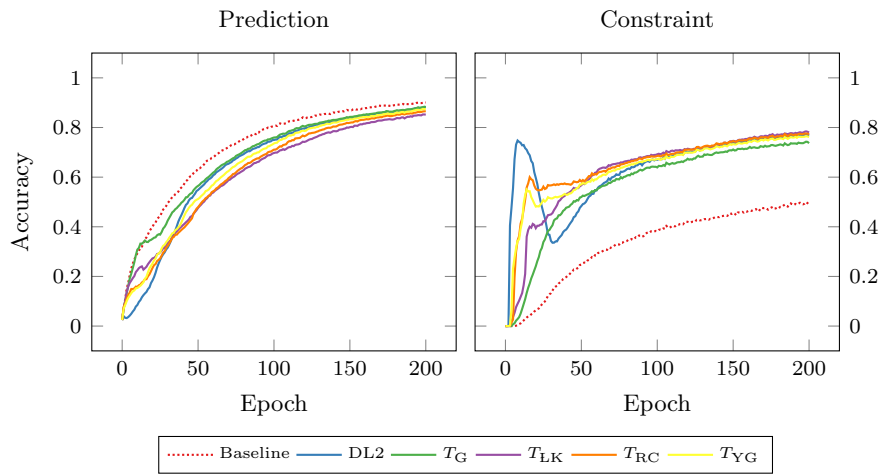

Figure 2: The figure shows how prediction accuracy (left column) and constraint accuracy (right column) change over time when training with the group constraint for 200 epochs with different logics on GTSRB.
